

**IN THE CLAIMS:**

The following is a complete listing of claims with their status in parentheses.

1. (currently amended) An igniter comprising:

an igniter body, said igniter body provided with a liquefied gas reservoir, and said igniter body having a holding portion;

a rod-like extension which extends from the igniter body and ~~has a flame port for~~ ejecting gas flame ~~therethrough on the leading end thereof~~, said rod-like extension having a base portion, said base portion supported for rotation on said holding portion;

a lock lever for locking the igniting action, said lock lever capable of engaging said base portion of said rod-like extension to interfere with the rotation of said rod-like extension when the lock lever is operated to release the lock; wherein

~~the base portion of the rod-like extension is supported for rotation~~ rotates with respect to the igniter body so that the angle made between the igniter body and the rod-like extension can be changed to change the direction of the flame port in a free state and locked when the igniting action is to be done.

2. (currently amended) An igniter as defined in Claim 1, in which said base portion of the rod-like extension having has a ring portion ~~is inserted for rotation into a~~ that rotates about an annular guide portion of said holding portion of the igniter body having an annular guide portion so that the angle made between the igniter body and the rod-like extension can be changed in a free state.

3. (cancelled)

4. (currently amended) An igniter as defined in Claim [[3]] 1, in which a part of the lock lever interferes with a part of the rod-like extension, when the lock lever is operated to release the lock, to fix the angle between the igniter body and the rod-like extension.

5. (previously amended) An igniter as defined in Claim 1 or 2 further comprising a tension member, which urges the rod-like extension to one direction with respect to the igniter body.

6. (currently amended) An igniter comprising:  
an igniter body, said igniter body provided with a liquefied gas reservoir,  
and

a rod-like extension which extends from the igniter body and has a flame port ejecting gas flame therethrough on the leading end thereof, wherein

the base portion of the rod-like extension is supported for rotation with respect to the igniter body, and the rod-like extension is balanced in by weights positioned on the ring portion of the front part and the rear part thereof opposite to each other, with the center of rotation of the rod-like extension intervening therebetween such that said rod-like extension is to be held horizontal in a free state, ~~and a mechanism for preventing the rotation of the rod-like extension is further provided.~~

7. (cancelled)

8. (currently amended) An igniter as defined in Claim [[7]] ~~6~~, in which the ~~having a~~ mechanism for preventing the rotation of the rod-like extension comprises ~~comprising~~ a lock lever, which interferes with a part of the base portion of the rod-like extension to prevent rotation thereof.

9. (previously amended) An igniter as defined in Claim 8, in which the lock lever locks the igniting action of the rod-like extension in a free state.
